

Exercise

Fast-test Architecture

Logic Room

#1 Challenge

Create a component using the Fast-test architecture to display a list of books from the books API.

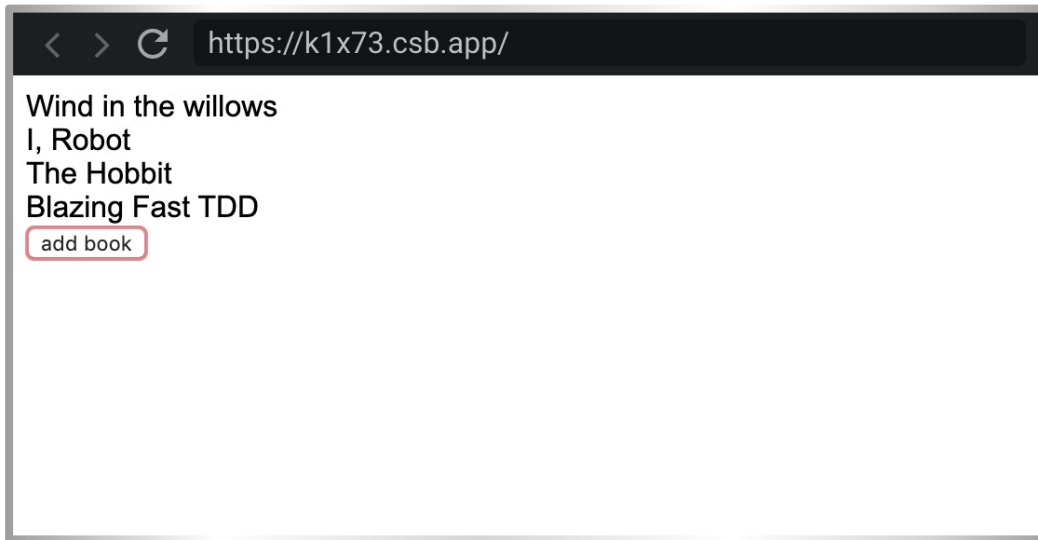

#2

Power-up

Logic Room

Using the Fast-test architecture add a button that let's you add a hardcoded book to the books API when the user clicks it.

#3

Resources

Logic Room

Lesson Start

<https://codesandbox.io/s/uft-module-1-demo-start-h2hvo>

1. Visit the link above and remember to open a codesandbox.io account to save progress
2. Work on the starter project and complete the challenge
3. The solution is provided below but not the power-up!

Backend Test API

GET <https://api.logicroom.co/api/<your email>/books> (list)

POST <https://api.logicroom.co/api/<your email>/books> (add)

"Content-Type": "application/json"

```
{  
  "name": "x_name",  
  "author": "x_author"  
}
```

Backend Test API reset

<https://api.logicroom.co/api/<your email>/reset>
